

BrownstoneIT satellite broadband

Broadband that is out of this world!

There is a new way to connect to the internet - **Satellite**

Satellite Broadband provides an always-on, high speed reliable internet connection without expensive telephone bills. Available anywhere in the UK now!

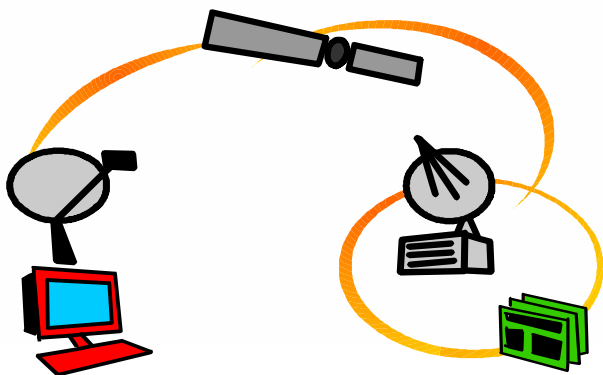

With **BrownstoneIT Broadband** you will get:

- high speed internet access without needing extra phone lines or requiring proximity to an enabled exchange
- an 'always on' connection - no more time wasted dialling-up
- download speeds up to 4mbps - up to 70 times faster than a 56K modem
- upload speeds of 128kbps - send large files faster
- ability to create virtual private networks, allowing offices to connect easily

How does it work?

- Request for information is sent from your PC, to your satellite dish and then up to the satellite.
- The signal is received at the Network Operations Centre. (NOC)
- The NOC passes your request to the desired internet site.
- The requested information is then forwarded to the NOC and then up to the satellite.
- The information is then zoomed direct to your satellite dish and then onto your computer.

BrownstoneIT Broadband will provide you with a 74cm dish, the indoor receiver/transmitter and the cabling to connect you to our satellite.

Our engineers will mount the dish in a suitable place on your building and cable it to the indoor equipment. They will then install the bespoke software and activate your connection - you now have always on internet access!

Most locations in the UK can communicate with the satellite using an 74cm dish mounted on the floor, wall or roof of a building. We carry out site surveys once we have received an order to determine the appropriate positioning of the equipment.

The products are available with either a USB or an ethernet connection. The USB cable will plug directly into a computer, and the service can be accessed over a network by using the dial-up network facility. The ethernet connection can plug directly into a hub or firewall.

The satellite broadband service is available anywhere within the footprint above.

We can provide the service to other countries outside of the UK, so please contact our sales team for more information.
